

PAOLA ROMERO

Data Analyst | Business Intelligence Analyst | SQL | Python | Power BI

State of Mexico, Mexico | paola.romero2812@gmail.com | (52) 55 2720 5434 | linkedin.com/in/paolaromeropez

PROFESSIONAL SUMMARY

Data Analyst with 8+ years of experience in data analysis, reporting, and business intelligence within consumer goods and service industries. Experienced in transforming operational and financial data into actionable insights, optimizing business processes, and developing KPI dashboards to support strategic decision-making. Recently earned a professional certificate in Data Science, with hands-on experience in Python, SQL, Power BI, statistical analysis, predictive modeling, and machine learning through real-world projects.

TECHNICAL SKILLS

Advanced Microsoft Excel (Pivot Tables, VBA Macros) | Power BI (Data Modeling, Dashboards)
SQL | Python (Pandas, NumPy, Scikit-learn) | Machine Learning | Statistical Analysis | Predictive Modeling
Git & GitHub | Streamlit | Plotly | Spanish (native) | English (Intermediate reading & writing, basic conversational)

PROFESSIONAL EXPERIENCE

Data & Process Consultant

Kya-Ro, Mexico

September 2023 – Present

- Designed and maintained financial and administrative databases, reducing reconciliation errors and decreasing monthly closing time by approximately 40% through advanced Excel solutions and data validation.
- Analyzed project performance, cost, and productivity metrics, identifying budget deviations and optimizing resource allocation through Excel and Power BI dashboards.
- Automated payroll, invoicing, and payment processes using Excel VBA macros and digital forms, reducing manual work and improving operational efficiency.

Data Analyst / Supervisor

Unilever Mexico (Helados Holanda)

November 2017 – August 2023

- Designed and developed executive dashboards to monitor nationwide operational KPIs using Power BI, Excel, and data modeling.
- Optimized reporting workflows, reducing report generation time by over 30% through automation and standardized reporting processes.
- Led reporting and analytics initiatives, improving data quality and supporting business decision-making across multiple operational teams.

Excel Solutions Developer (Independent Project)

State of Mexico

September 2015 – October 2017

- Designed and commercialized an Excel VBA automation platform for monthly medical reporting.
- Reduced report preparation time by up to 80% for healthcare professionals in the State of Mexico.
- Gathered business requirements and designed automated workflows focused on operational efficiency.

EDUCATION

Data Science Bootcamp

TripleTen | Python, SQL, Machine Learning, Statistical Analysis, Git & GitHub

Professional Certificate: 2026

Bachelor of Science in Chemical Engineering

Universidad Autónoma Metropolitana (UAM) | Bachelor's degree

Graduated: 2016

PROJECTS

Customer Churn Prediction – Data Science

TripleTen

2026

Developed and optimized a machine learning model to predict customer churn by integrating multiple datasets, performing exploratory data analysis, feature engineering, and comparing classification algorithms.

- **Technologies:** Python, Pandas, NumPy, Scikit-Learn, CatBoost, Matplotlib, Machine Learning
- **Key Achievement:** Achieved AUC-ROC of 0.90 and F1-score of 0.69, improving early customer retention strategies.

Taxi Demand Forecasting – Time Series

TripleTen

2026

Built a time series forecasting model to predict hourly taxi demand using lag features, temporal transformations, and regression algorithms.

- **Technologies:** Python, Pandas, NumPy, Scikit-Learn, Time Series, Feature Engineering
- **Key Achievement:** Achieved an RMSE of 43.10, exceeding the project's target performance

SQL Case Study – Taxi Trips Analysis

TripleTen

2026

Analyzed relational databases using advanced SQL queries to segment taxi companies and trips, and performed statistical hypothesis testing to evaluate the impact of weather conditions on trip duration.

- **Technologies:** SQL, PostgreSQL, Python, Pandas, Inferential Statistics
- **Key Achievement:** Identified key operational and external factors affecting taxi demand and trip duration, providing data-driven insights through SQL analysis and statistical hypothesis testing.

Interactive Data Analysis Web Application – Data Web App

TripleTen

2025

Developed an interactive web application for exploratory data analysis using Python, Streamlit, and Plotly. Deployed the application to the cloud using GitHub and Render while managing virtual environments and project dependencies.

- **Technologies:** Python, Pandas, Plotly, Streamlit, GitHub, Render
- **Key Achievement:** Successfully designed and deployed a fully functional web application for interactive dataset exploration, demonstrating end-to-end development and cloud deployment skills.
